

Yves Deswarte Award

(May 2026)

Background

Yves was a passionate and visionary researcher who made several major research contributions during his career. As an engineer, he contributed to the emergence during the 70's of two essential technologies: micro-computing and packet switched networks. In the 80's, he developed innovative distributed architectures that were tolerant to both accidental and malicious threats.

During his career at INRIA and CNRS, he was a major actor in computer security in France and at the international level. He co-advised several generations of doctorate students and engineers. He obtained significant research results in this area, e.g., in intrusion tolerance and security assessment and privacy protection. He was a prominent advocate of the concept of a "white" ID card, allowing users to be authenticated while disclosing only a minimum amount of personal information.

He obtained the Kristian Beckman Award from IFIP TC-11 and Outstanding Service Awards from IFIP and ESORICS. He also held several responsibilities within IFIP TC-11 and the ESORICS Conference. Unanimously appreciated by his colleagues, Yves was a likeable person, passionate about his work and particularly invested for the success of the students and researchers that he advised during his career.

This award is presented at the closing ceremony of the annual SEC conference to the presenting author of the 'Best Student Paper'.

TC-11 is proud to dedicate this award to his memory, as recognition of his lasting contribution.

Eligibility rules

- Only accepted student papers for the IFIP TC11 SEC conference will be considered (subject to a completed registration)
- The student must be the lead author
- The student must provide evidence they are/were an enrolled student at the time of submission (typically during the initial submission process)
- The student must present the paper at the conference. This can be in-person or virtual, but not pre-recorded (i.e. there must be an opportunity for the delegates/judges to ask questions)

Judging process

- A shortlist of eligible student papers will be provided to the WG11.8 chair by the SEC PC Chair in ranked order (showing the review score/weighted score)
- The WG11.8 Chair will coordinate the judging process
- Presentations to be ranked based on criteria agreed by the WG11.8 Officers
- In the event of a tie, the WG11.8 Chair will make the final decision

Prize

- The winner will receive payment of €1000 EUR, payable by TC11
